Unit of Study Code: PSYC2014

Coordinator:  
Dr Niko Tiliopoulos  
Office: Room 448, Brennan MacCallum Building  
Phone: 9036 9223  
E-mail: niko.tiliopoulos@sydney.edu.au  

Teaching staff:  
Dr Fiona Hibberd  
Office: Room 451, Brennan MacCallum Building  
Phone: 9351 2867  
E-mail: fiona.hibberd@sydney.edu.au  

Dr Carolyn MacCann  
Office: Room 449, Brennan MacCallum Building  
Phone: 9351 4236  
E-mail: carolyn.maccann@sydney.edu.au  

Associate Professor Fiona White  
Office: Room 426, Brennan MacCallum Building  
Phone: 9351 3246  
E-mail: fiona.white@sydney.edu.au  

Format of unit:  
3 x one-hour lectures/week x 13 weeks (Monday, Wednesday, Thursday)  
1 x one-hour tutorial/week x 12 weeks  
13 x two-hour field/library research

Credit point value: 6 Credit Points

Prerequisites: 12 credit points of First Year Psychology including PSYC 1001 & PSYC 1002

Assessment:  
1. CLASSWORK  
   A. 2000-word essay (35% of total mark)  
      Due Date: Monday August 29 (Week 6)  
   B. Minor assessment, in-class short-answer quiz (15% of total mark)  
      Due Date: Week 12  

2. EXAMINATION:  
   2 hr. exam, consisting of multiple-choice and a written component  
   (50% of total mark)

TEACHING & LEARNING COMMITTEE POLICY: ALL pieces of students’ written assessments are to be submitted on-line to ensure that plagiarism detection software can be implemented.

Textbook:  

Additional reading material will be placed on the course’s blackboard page and in the Reserve section of the library.
UNIT OF STUDY DESCRIPTION

General description: The main aim of this course is to introduce students to a number of influential theories in personality and intelligence. Students will be exposed to some conceptual analysis and will be expected to gain an understanding and be able to examine critically the various theories covered. Furthermore, students will be introduced to key topics in the scientific study and assessment of individual differences (Psychometrics) in personality and intelligence. The course will cover both conceptual (e.g. validity and reliability) and applied (e.g. Factor Analysis) elements of statistical psychometric inference.

Specific Graduate Attributes & Student Learning Outcomes for Personality & Intelligence I
This course is structured around the graduate attributes associated with the scientist-practitioner model, the basis for the training of psychologists in Australia and internationally. Graduate Attributes are the generic skills, abilities and qualities that students should acquire during their university experience and the School of Psychology is committed to providing an environment to promote these skills. In addition, this unit of study will provide students with generalised and transferable skills that will also be useful in careers outside psychology.

The following graduate attributes and student learning outcomes will be developed through lectures, tutorial and assessment activities in particular. They will be assessed primarily in the essay and in the final examination.

1. Knowledge and Understanding of Personality & Intelligence I
Display basic knowledge and understanding of the major concepts, theoretical perspectives, empirical findings, and historical trends in Personality & Intelligence.

Student learning outcomes:

(i) To stimulate an interest in the contribution of personality and differential psychologists to the understanding of the individual, their attitudes, motives, behaviour, and thought across the lifespan, and the foundations of differential group differences.
(ii) Ability to describe, explain and evaluate research studies and theories in the area of personality and differential psychology.
(iii) Ability to describe the course of personality and intelligence development, their foundations, function, and consequences.

2. Research Methods in Personality & Intelligence I
Understand, apply and evaluate basic research methods in Personality & Intelligence, including research design, data analysis and interpretation, and the appropriate use of technologies.

Student learning outcomes:

(i) To develop a critical understanding of the major methods of research and assessment in these areas.
(ii) To critically assess the major theories and research findings in these areas.
(iii) To interpret statistical analyses.
(iv) Use basic web-search, word-processing, database, email, spreadsheet, and data analysis programs.
(v) Design and conduct basic studies to address psychological questions: Frame research questions; undertake literature searches; critically analyse theoretical and empirical studies; formulate testable hypotheses; operationalise variables; choose an appropriate methodology; make valid and reliable measurements; analyse data and interpret results; and write research reports.

3. Critical Thinking Skills in Personality & Intelligence I
Respect and use critical and creative thinking, sceptical inquiry, and the scientific approach to solve related problems.

Student learning outcomes:

(i) Demonstrate an attitude of critical thinking that includes persistence, open-mindedness, and intellectual engagement.
(ii) Evaluate the quality of information, including differentiating empirical evidence from speculation.
(iii) Evaluate issues and behaviour using different theoretical and methodological approaches.
(iv) Use reasoning and evidence to recognise, develop, defend, and criticise arguments and persuasive appeals.
(v) Demonstrate a capacity for higher-order analysis, including the capacity to identify recurrent patterns in human behaviour.
4. Values in Personality & Intelligence I
Value empirical evidence; act ethically and professionally; and understand the complexity of sociocultural and international diversity.

Student learning outcomes:
(i) Recognise and respect social, cultural, linguistic, spiritual, and gender diversity.
(ii) Use information in an ethical manner (e.g., acknowledge and respect the work and intellectual property rights of others through appropriate citations in oral and written communication).
(iii) Exhibit a scientific attitude in critically thinking and learning about human behaviour, and in creative and pragmatic problem solving.
(iv) Be able to recognise and promote ethical practice in research and academic correspondence.
(v) Promote evidence-based approaches to understanding behaviour, motivation, and thought.

5. Communication Skills in Personality & Intelligence I
Communicate effectively in a variety of formats and in a variety of contexts.

Student learning outcomes:
(i) Write a standard research report and essay using American Psychological Association (APA) structure and formatting conventions.
(ii) Write effectively in an essay and research report formats, and for a variety of purposes (e.g., informing, arguing).
(iii) Demonstrate effective oral communication skills in various formats (e.g., debate, group discussion) and for various purposes.
(iv) Collaborate effectively, demonstrating an ability to: Work with groups to complete projects within reasonable timeframes; manage conflicts appropriately and ethically.

6. Learning and the Application of Personality & Intelligence I
Understand and apply psychological principles to personal and interpersonal issues.

Student learning outcomes:
(i) To develop an awareness of the applications of the theories and research findings in Personality & Intelligence.
(ii) Apply psychological concepts, theories, and research findings to solve problems in everyday life and in society.
(iii) Understand major areas of applied Personality & Intelligence.
(iv) Demonstrate a capacity for independent learning to sustain personal and professional development in the changing world of the science and practice of psychology.

7. School of Psychology plagiarism policy information for students
Plagiarism is NOT permitted.

(i) Are you sure you know what plagiarism is?
Please refer to the University policy on plagiarism:

(ii) The School of Psychology will penalise all submitted work that is plagiarised.

(iii) The School of Psychology is using software to detect all forms of plagiarism.
