PSYC3010 – Advanced Statistics for Psychology

Unit of Study Code: PSYC3010

Coordinator: Dr Sabina Kleitman
Office: Room 441 Brennan MacCallum Building
Phone: 9351 7703
E-mail: sabina.kleitman@sydney.edu.au

Other Teaching Staff: Dr Margaret Charles
Office: Room 452 Brennan MacCallum Building
Phone: 9351 3354
E-mail: margaret.charles@sydney.edu.au

Student contact/Senior tutor: Alex Russell
Office: Room 310 Griffith Taylor Building
Phone: 9036 7265
E-mail: alexr@psych.usyd.edu.au

Format of Unit: 2 x 1 hour lectures/week x 13 weeks
1 x 2 hour tutorial/week x 12 weeks

Credit Point Value: 6 Credit Points

Qualifying: PSYC (2012 or 2112) plus one other Intermediate Psychology Unit from PSYC (2011 or 2111), PSYC (2013 or 2113), PSYC (2014 or 2114).

Assessment: Classwork:

SECTION 1
Tutorial test, 10% of the total mark of the unit
Week 5, August 22 to August 26
1,000 words Assignment, 15% of the total mark of the unit
Due Date: Monday 12th September

SECTION 2
Tutorial Prac, 20% of the total mark of the unit
Week 11, 10 October to 14 October
Tutorial Test, 5% of the total mark of the unit
Week 13, 24 October to 28 October

Examination: 50% of the total mark of the unit
part multiple choice, part short answer questions
Unit of study general description:

The first section of this course deals with the design and analysis of experiments in psychology for which some form of analysis of variance is appropriate. The second section of the course deals with multiple regression and path analyses. Tutorials for both parts will involve the use of statistical packages on a computer as well as hand calculators. Students should bring a calculator to all tutorials.

Graduate Attributes and Student Learning Outcomes

This course is structured around the graduate attributes associated with the scientist-practitioner model, the basis for the training of psychologists in Australia and internationally. Graduate Attributes are the generic skills, abilities and qualities that students should acquire during their university experience and the School of Psychology is committed to providing an environment to promote these skills. In addition, this unit of study will provide students with generalised and transferable skills that will also be useful in careers outside psychology.

The following graduate attributes and student learning outcomes will be developed through lectures, tutorial and assessment activities in particular. They will be assessed primarily in the tutorial test, written assignment, tutorial prac and in the final examination.

1: Knowledge and Understanding of Advanced Statistics for Psychology

Display advanced knowledge, conceptual and applied, of statistical tools most often used in psychological research, whether experimental or survey based.

Student learning outcomes:

At the end of this course, students will be able to:

(i) Critically analyse empirical studies
(ii) Calculate and interpret a one-way analysis of variance, including tests of contrasts.
(iii) Calculate, analyse and interpret data from factorial designs including ANOVA and contrasts.
(iv) Demonstrate a deep understanding of the problem of multiple comparisons and control of the Type I error rate.
(v) Demonstrate understanding of issues involved in the treatment of data involving repeated measurements.
(vi) Perform computer-based analyses for ANOVA and contrast testing, and interpret the results appropriately.
(vii) Calculate and interpret multiple regression (MR) and related methods.
(viii) Evaluate different types of MR and choose the analysis appropriately for a research question.
(ix) Carry out computer-based analyses for MR and to interpret the results appropriately.
(x) Evaluate how matters of the reliability of psychological test items affect research and data analyses.
(xi) Write effectively psychological reports that cover both ANOVA and MR analyses.
(xii) Use spreadsheet and data analysis programs, focusing on SPSS.
(xiii) Have basic understanding of the AMOS programme.

2: Research Methods in Advanced Statistics for Psychology

Understand, apply and evaluate research methods in Psychology, including research design, advanced data analysis and interpretations, and the appropriate use of terminology.

Student learning outcomes:

(i) To develop a critical understanding of the major methods of research in psychology and how they relate to psychology as science.
(ii) Ability to distinguish and evaluate research studies that focus on finding causality or/and prediction.
(iii) Demonstrate an understanding of the conceptual link between ANOVA and MR analyses.
(iv) Undertake statistical analysis appropriately.
(v) Interpret statistical analyses correctly and competently depending on the research design and the postulated hypotheses.
(vi) Develop the ability to describe the key principles for designing and evaluating research focusing on behaviour change.
(vii) Evaluate and use relevant statistical terminology appropriately in psychological research.
(viii) Design basic studies to address psychological questions: frame research questions; formulate hypotheses; operationalise variables; choose an appropriate methodology and data analysis technique; analyse data and interpret results appropriately; and write interpretations and research reports.

3: Critical Thinking Skills in Advanced Statistics for Psychology
Respect and use critical and creative thinking, sceptical inquiry, and the scientific approach to solve problems related to thought and behaviour.

Student learning outcomes:
(i) Demonstrate an attitude of critical thinking that includes persistence, open-mindedness, and intellectual engagement.
(ii) Evaluate the quality of information, including differentiating empirical evidence from speculation.
(iii) Evaluate issues of causality versus prediction using different theoretical and methodological approaches.
(iv) Use reasoning and evidence to recognise, develop, defend, and criticise arguments based on research design and statistical analyses.
(v) Demonstrate a capacity for higher-order analysis, including the capacity to identify patterns in human behaviour.
(vi) Recognise and defend against the major fallacies of research design and data analyses.
(vii) Demonstrate creative and pragmatic problem solving.

4: Values in Advanced Statistics for Psychology
Value empirical evidence; act ethically and professionally.

Student learning outcomes:
(i) Promote evidence-based approaches to understanding behaviour.
(ii) Be able to recognise problems associated with biased sampling methods
(iii) Evaluate how matters of the reliability of psychological test items affect results.
(iv) Recognise the limitations of psychological research methods.
(v) Exhibit a scientific attitude in critically thinking about, and learning about, human behaviour, and in creative and pragmatic problem solving.

5: Communication Skills in Advanced Statistics for Psychology
Communicate effectively in a variety of formats and in a variety of contexts.

Student learning outcomes:
(i) Interpret the results effectively using relevant terminology and formats (e.g., assignment, tutorial prac)
(ii) Learn to communicate the results effectively for a variety of purposes (e.g., scientific report; to inform lay audience).

6: Learning and the Application of Advanced Statistics for Psychology
Understand and apply psychological principles to personal and social issues.

Student learning outcomes:
(i) To develop an awareness of the applications of the statistical theory and research design in psychology.
(ii) Apply psychological research design to examine problems in everyday life and in society.
(iii) Understand major issues involved in debates about research design in psychology.
(iv) Demonstrate a capacity for independent learning to sustain personal and professional development in the changing world of the science and practice of psychology.
SYLLABUS

Section 1. Anova and Contrasts.

The one way fixed effects ANOVA model: partitioning variation and degrees of freedom. Expected mean squares and the formation of F ratios.

Asking focused questions: testing contrasts. Planned orthogonal contrasts. Trend analysis.

Controlling the Type I error rate with multiple comparisons: the Scheffe procedure and the Bonferroni procedure.

Factorial designs: The two way ANOVA model with fixed effects. Partitioning between-group variation into main effects and interaction effects. Main effect and interaction contrasts for a two way ANOVA design.

Decision-wise vs family-wise control of Type I errors.

Repeated measures or within-subject variables. Differing approaches to the analysis of repeated measures data. Planned contrasts for designs involving repeated measures data.

Section 2. Multiple Regression and Beyond.

Multiple Regression: Revision of Simple Linear Regression model and Introduction to Multiple Linear Regression.

Multiple Regression: Multiple independent variables, the assumptions, the estimates, the SPSS output. Prediction and Explanation. Different types of Multiple Regression.

Categorical Variables in Multiple Regression: Dummy Variables.

Beyond Multiple Regression: Path analysis. Introduction to AMOS.

Test reliability, its estimation, effects of unreliability

Plagiarism is not permitted

i) Do you know what plagiarism is?
Please refer to the University policy on plagiarism:

ii) The School of Psychology will severely penalise all submitted work that is plagiarised;

iii) The School of Psychology is using software to detect all forms of plagiarism.
Research and resource support for Psychology students

The University of Sydney Library has 12 libraries in different locations, on different subjects with different facilities. Fisher Library is where you will find the physical collection of most relevance to your Psychology studies. Fisher Library is located on Eastern Ave, Camperdown campus. We also have loads available online – find us at sydney.edu.au/library/<https://www.owa.usyd.edu.au/exchweb/bin/redir.asp?URL=https://www.owa.usyd.edu.au/Exchweb/bin/redir.asp?url=http://sydney.edu.au/library/>

You can contact your Psychology Faculty Liaison Librarian at library.psychology@sydney.edu.au<mailto:library.psychology@sydney.edu.au>. The Psychology Librarian is located at Badham Library, level 1, Badham Building, Science Rd, Camperdown Campus. You can phone 91141292 or send an email psychology.library@sydney.edu.au
